

# Types of single crystal solar panels

## Overview

---

What are the different types of solar panels?

The main differences between various types of solar panels e.g. monocrystalline, polycrystalline, and thin-film solar panels lie in their efficiency, cost, and suitability for different applications: Monocrystalline panels are made from high-purity silicon formed into a single continuous crystal structure.

What are single-crystal solar panels?

Single-crystal panels, also called monocrystalline silicon panels, are one of the most mature solar energy technologies on the oldest group. They are simply reinforced with high-purity silicon crystals, and are instantly recognizable by their consistent dark tint and their rounded borders. They are high efficiency and long lasting panels.

What are polycrystalline solar panels?

Polycrystalline solar panels are one of the oldest types of solar panel in existence, and now account for 0% of global production, according to the National Renewable Energy Laboratory (NREL). Their cells are made by melting multiple silicon crystals and combining them in a square mould.

Are polycrystalline solar panels better than monocrystalline panels?

Polycrystalline solar panels are made from multiple silicon crystals, resulting in a lower efficiency compared to monocrystalline panels. However, they are more cost-effective to produce and perform better in high-temperature conditions.
