

UPS uninterruptible power supply for Yamoussoukro computer room

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

What is an uninterruptible power supply for server room use?

An uninterruptible power supply for server room use is a backup power solution that kicks in instantly when the main power source fails or fluctuates. It bridges the gap between a power outage and the switchover to a backup generator or safe shutdown.

How does ups work in a server room?

UPS for server room works in three main ways of functioning. Here, the UPS gets its power from the regular power supply. This supply has the right voltage and frequency the UPS needs to work. During the Normal Mode a piece called a rectifier changes AC power to DC power. This powers up an inverter and charges batteries.

What happens if a ups fails in a server room?

If a UPS in a server room encounters a glitch, or if there's a power outage, and the battery exhausts itself, the unit starts relying on its bypass. UPS for server room will use this bypass to supply power as long as the voltage and frequency stay within established limits.

UPS uninterruptible power supply for Yamoussoukro computer room
