Overview

What is an uninterruptible power supply system (UPS)?

2.1 An uninterruptible power supply system (UPS) is defined as a device which for a specific period of time supplies continuous power to radio equipment independent of any power failures in the ship's main or emergency source of electric energy.² rechargeable accumulator batteries, complying with the requirements of annex 1.

What are uninterruptible power supply standards?

Uninterruptible power supply standards are established technical frameworks that define the minimum acceptable levels of safety, functionality, and efficiency for UPS systems. These standards are not arbitrary they are the result of decades of research, development, and practical field data gathered by industry experts, scientists, and engineers.

How do I choose the best uninterruptible power supply?

Seek out third-party certifications or independent lab testing reports, especially for enterprise or mission-critical applications. Reputable review organizations may also compare models side by side, highlighting which ones best adhere to current uninterruptible power supply standards.

Who is responsible for enforcing uninterruptible power supply standards?

Multiple global and regional organizations are responsible for developing and enforcing uninterruptible power supply standards. Each body brings a unique focus, often catering to specific industries or geographies.
