

Vilnius new liquid flow battery manufacturer

Overview

What is Lithuania's first commercial battery storage site?

This facility, which is set to become Lithuania's first commercial battery storage site, will significantly increase the country's storage capacity by around 50%. The project, located near the capital city of Vilnius, is expected to be operational by the end of 2025.

What are flow batteries?

Advances like high-performance materials, machine learning, and automation advance flow batteries, a type of rechargeable battery that uses two liquid electrolytes to store energy. By utilizing nanomaterials in the construction of electrodes and membranes, flow batteries achieve higher power densities and longer lifetimes.

Are iron flow batteries better than Li-ion batteries?

Iron flow batteries have a longer asset life than Li-ion batteries. Battery manufacturers are collaborating with utility companies to implement iron flow battery projects, aiming to replace diesel-fueled power generation with the more environmentally friendly flow battery system.

Are flow batteries the future of energy storage?

Flow batteries, with their ability to create a more stable grid and reduce grid congestion, are considered a promising technology for energy storage. Their adoption is closely linked with the surging energy storage market and can help fill renewable energy production shortfalls.
