

# **What are the wind power base stations for mobile communications in Brazil**

## Overview

---

How much wind energy will Brazil have by 2024?

Partner with our green recruitment company to find top talent for your renewable energy projects. According to the Brazilian Association of Wind Energy (ABEEólica), the expectation is that by 2024, Brazil will have at least 30 GW of installed wind energy capacity, considering only auctions already held and contracts signed.

Can wind energy be used to produce hydrogen in Brazil?

Future Directions With its vast coastline and favorable climatic conditions, Brazil has begun to explore the potential for green hydrogen production using offshore wind energy (Figure 24). This approach combines two key technologies for energy transition: renewable energy generation and hydrogen production as a clean energy carrier.

How big are Brazilian wind energy projects?

The Brazilian wind energy generation projects have not been happening in a wide range of sizes, as could be seen in this sample, which covers almost all the projects that have succeeded at the auctions. Other sources of energy have a much wider range of sizes, giving more room for scale gains.

Is Brazilian wind energy the second main source of energy?

In recent years, Brazilian wind energy has been growing on a fast trajectory, with the prospect of being the second main source of energy in the year 2019 after hydroelectricity. It should be reaching an installed capacity of more than 20 GW by 2022.
