Overview

What is the energy storage project?

The Gilboa pumped storage power plant is an energy storage project that involves constructing a power plant to pump water from a low-level reservoir to a high-level reservoir, with a height difference of 574 meters. This environmentally friendly plant complements the unique landscape of the North of Israel.

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What are the core functions of energy storage power stations?

In addition to these core functions, functions such as anti-backflow protection, support for parallel/off-grid operation, and islanding protection further enhance the reliability and versatility of energy storage power stations.

Why do battery storage power stations need a data collection system?

Battery storage power stations require complete functions to ensure efficient operation and management. First, they need strong data collection capabilities to collect important information such as voltage, current, temperature, SOC, etc.
