Overview

Do solar air conditioners work?

Not only can solar-powered air conditioners reduce greenhouse gas emissions, but they can also help slash utility bills. And solar AC owners won't have to worry when utilities employ rolling blackouts on the hottest days to avoid grid overuse. Their ACs work independently of the power company. How does a solar AC work?

In simple terms, solar ACs use solar panels to power the air conditioning system. Solar panels collect energy from the sun. They convert this energy into power. That power either goes directly to the air conditioner or to a battery where it's stored until the AC needs it.

Can solar energy be used in air conditioning?

One such application of this renewable energy source is in air conditioning, through solar air conditioners. These heating and cooling appliances can work by using the sun as an energy source. Reduced energy bills and minimal environmental impact are just some of the benefits which this energy source provides.

What is a solar AC system?

Most solar AC systems are hybrid, meaning they use traditional electricity sources in addition to solar power. Hybrid systems are more popular in very hot environments where it's necessary to run the AC at night (when there's no sun) to keep comfortable. For complete off-the-grid air conditioning, there are solar-only systems.
