

# Which pole should be installed first when the battery cabinet is loaded

## Overview

---

Which car battery terminal should be connected first?

When installing a new battery, it is recommended to connect the positive (red) terminal first. This is because connecting the negative (black) terminal first can create a short circuit, which can be dangerous. What is the correct order for connecting and disconnecting car battery terminals?

.

Should a positive terminal be attached first when replacing a car battery?

Attaching the positive terminal first when replacing a car battery reduces the risk of a short circuit. If the negative terminal is attached first, the positive terminal could accidentally touch a metal part of the car, which could cause a spark and potentially ignite any gas vapors in the area.

When connecting a battery a positive or negative terminal first?

Discerning the correct order between positive and negative first when connecting a battery can be confusing without a proper guide. So, here's the answer - connect the positive terminal first when connecting a battery before the negative terminal. The BIG QUESTION is - why connect the positive terminal first?

.

What is the correct order for connecting a car battery?

The correct order for connecting a car battery is to connect the positive terminal first and then the negative terminal. When disconnecting a car battery, the order is reversed: disconnect the negative terminal first and then the positive terminal.
