

# **Will it be hotter if there are solar panels on the roof**

## Overview

---

Solar panels don't make your house hotter and actually help keep your house cooler by reflecting some of the sun's heat away from the roof. Do solar panels affect the temperature in Your House?

Solar panels are one of the most effective passive methods to cool buildings. The mounted panels will act as roof shade, and they would also generate energy from the sun that should initially beat down your roof. However, does this mean that solar panels affect the temperature in your house?

Yes, it does.

Do solar panels make your house hotter?

The solar array reduces the heat absorbed by your roof during the day by absorbing it. Additionally, solar panels are mounted directly to face the sun. Thus, when solar panels absorb the light and heat energy from the sun, the light energy is converted to DC while a convection current removes the heat energy.

Do solar panels cool a house?

A study conducted by UC San Diego researchers confirms that solar panels reduce the amount of heat that reaches the roof by 38%. Therefore, keeping building roofs 5 degrees Fahrenheit cooler. Do Solar Panels Affect The Temperature Inside The House?

Solar panels are one of the most effective passive methods to cool buildings.

How do solar panels affect your roof?

The heat energy absorbed by your roof increases the heat in your home, while the UV rays cause damage to your roof. However, investing in some solar panels can reduce this. The panels absorb the heat and light energy, then convert them to sufficient current instead of shining down directly on your roof.
